Jamie Hey

Game Developer · Solo Dev · C# & Unity

Tamworth, UK · 07939 090 534 · jamie.hey@sky.com · LinkedIn · GitHub · Portfolio · Steam Game

PROFILE

Independently designed, built, and shipped a commercial 2D game on Steam. Sole ownership of all systems, architecture, AI, audio, and release. Backed by 2+ years of commercial software engineering experience in C# .NET and React/TypeScript at CorPay; promoted from apprentice to engineer in 2024 for consistent delivery and code quality. Driven by clean architecture, well-crafted systems, and making things people actually enjoy playing.

KEY SKILLS

Game Dev	Unity · C# · Game Architecture · Enemy AI · State Machines · FMOD · Steam SDK · Steamworks
Programming	C# .NET · REST APIs · React · TypeScript · Vitest
Tooling	Git (GitHub / GitLab) · CI/CD · Jira · Agile / Scrum · Postman
Creative	Adobe CC · Blender · UX / UI Principles · Figma · FL Studio

SHIPPED TITLE

Sole Developer | Existerror Digital | *Steam - Personal Project*

View on Steam →

Fully shipped commercial 2D game built in Unity and C#. Took sole ownership from blank file to public Steam release, covering all game systems, design, art direction, and marketing.

- Designed and implemented all core game systems including enemy AI, player mechanics, and progression - using state machines and modular architecture to keep systems decoupled and extensible
- Integrated FMOD for dynamic audio design, creating reactive soundscapes that respond to in-game state
- Shipped via Steam SDK - handled Steamworks integration, achievements, store page, capsule art, trailer, and release pipeline end-to-end
- Sole ownership of the full codebase from architecture decisions through to public release, including post-launch fixes and updates
- Applied defensive coding and modular design patterns to maintain a clean, maintainable codebase throughout development.

2 more titles currently in development. A 3d sequel to Don’t Forget to Smile and a business/tycoon simulation. Taking leaps into the 3d world and designing around the future implementation of multiplayer.

PROFESSIONAL EXPERIENCE

Software Engineer | CorPay **(Hybrid)** | *Mar 2023 - Present*

CorPay delivers white-label fleet management solutions internationally. Working across a C# .NET backend and React/TypeScript frontend, serving multiple lines of business.

- Refactored legacy C# API layer - consolidated error handling and removed widespread code duplication across multiple endpoints, improving reliability and maintainability

- Rebuilt React portal navigation architecture - replaced legacy structure with a scalable vertical sidebar, improving accessibility, consistency, and future extensibility
- Collaborated directly with stakeholders to translate business requirements into delivered features, reducing ambiguity between design and development

EDUCATION & CERTIFICATIONS

BSc (Hons) Computing & IT with Business - Open University *(part-time, in progress)*

Level 4 Software Engineering - Digital Native, 2024

BTEC Level 3 Media & Digital Art - DDM · North Warwickshire & Hinckley College, 2012

10 GCSEs including Grade A in Maths
